

SMBMap

SMBMap是一个可以使安全审计人员使用此工具进行枚举Samba共享驱动器、列表共享驱动器、驱动器权限、共享内容、上传/下载功能。甚至可以使用SMBMap进行自动下载模式匹配或执行远程命令。

由于该工具设计时考虑到了渗透测试等，旨在简化夸大型网络搜索潜在的敏感数据过程。

——ShawnDEvans

一，帮助文档

```
usage: smbmap [-h] (-H 主机 | --host-file 文件) [-u 用户名] [-p 密码] [-s 分享] [-d 域] [-P 端口] [-v] [--admin] [-x 命令] [--mode CMDMODE] [-L | -R [路径] | -r [路径]]
               [-A 模式 | -g] [--dir-only] [--no-write-check] [-q] [--depth 深度]
               [--exclude 分享 [分享 ...]] [-F 模式] [--search-path 路径] [--search-timeout 超时]
               [--download 路径] [--upload 源 ] [--delete 文件路径] [--skip]
```

可选参数：
-h, --help
显示此帮助消息并退出

主要论点：
-H 主机
主机的IP

--host-file 文件
从文件中枚举主机地址进行扫描

-u 用户名
用户名，如果没有可省略此参数并假定为空会话

-p 密码
密码或NTLM哈希

-s 分享
指定共享（默认C\$），例如“C\$”

-d 域
域名（默认工作组）

-P 端口
指定SMB端口，默认为445

-v

扫描对方主机操作系统版本并打印

--admin

如果对方是操作系统管理员则报告此消息

命令执行:

在指定主机上执行命令的选项

-x 命令模式

执行 'ipconfig /all'命令

--mode 命令模式

设置执行方法, wmi或psexec, 默认wmi

分片驱动器搜索:

用于搜索/枚举指定主机的共享的选项

-L

列出指定主机上的所有驱动器

-R [文件]

递归地列出目录和文件(没有share\path列出所有共享), 例如'C\$\Finance'

-r [文件]

列出目录的内容, 默认为列出所有共享的根目录, 例如-r'C\$\Documents和Settings\

-A 模式

定义一个文件名模式(regex), 它自动下载匹配的文件(需要-R或-R), 而不是cas

-g

使输出grep友好, 与-r或-r一起使用(否则它什么也不输出)

--dir-only

只列出目录, 普通文件。

--no-write-check

跳过检查, 查看驱动器是否授予写访问权限。

-q

安静详细的输出。仅显示您已读取或写入的共享, 并在执行搜索(-A)时隐藏文件列表。

--depth 深度

将目录树遍历到特定深度。默认值为5。

--exclude 分享 [SHARE ...]

从搜索和列表中排除共享, 例如--排除管理员'C\$'

文件内容搜索:

搜索文件内容的选项(必须以根用户身份运行)

-F 模式

文件内容搜索, -F'[Pp]assword'(需要管理员访问权限才能在受攻击主机上执行命令和PowerShell)

--search-path 文件

指定要搜索的驱动器/路径(与-F一起使用, 默认为C:\用户), 例如'D:\ HR'

--search-timeout 超时

指定文件搜索作业终止前的超时时间(秒)。默认值为300秒。

文件系统交互:

与指定主机的文件系统交互的选项

--download 文件

从远程系统下载文件。 ' C \$ \ temp \ passwords.txt '

--upload 源 目标

上传文件到远程系统ex。 ' C\$\temp\payload.exe '

--delete 文件路径

删除远程文件, 例如。 ' C\$\temp\msf.exe '

--skip

跳过删除文件确认提示

```
usage: smbmap [-h] (-H HOST | --host-file FILE) [-u USERNAME] [-p PASSWORD] [-s SHARE] [-d DOMAIN] [-P PORT] [-v] [--admin] [-x COMMAND] [--mode CMDMODE] [-L | -R [PATH] | -r [PATH]]
               [-A PATTERN | -g] [--dir-only] [--no-write-check] [-q] [--depth DEPTH] [--exclude SHARE [SHARE ...]] [-F PATTERN] [--search-path PATH] [--search-timeout TIMEOUT]
               [--download PATH] [--upload SRC DST] [--delete PATH TO FILE] [--skip]
```

SMBMap - Samba Share Enumerator | Shawn Evans - ShawnDEvans@gmail.com

optional arguments:

-h, --help show this help message and exit

Main arguments:

-H HOST	IP of host
--host-file FILE	File containing a list of hosts
-u USERNAME	Username, if omitted null session assumed
-p PASSWORD	Password or NTLM hash
-s SHARE	Specify a share (default C\$), ex 'C\$'
-d DOMAIN	Domain name (default WORKGROUP)
-P PORT	SMB port (default 445)
-v	Return the OS version of the remote host
--admin	Just report if the user is an admin

Command Execution:

Options for executing commands on the specified host

-x COMMAND	Execute a command ex. 'ipconfig /all'
--mode CMDMODE	Set the execution method, wmi or psexec, default wmi

Share drive Search:

Options for searching/enumerating the share of the specified host(s)

-L	List all drives on the specified host
-R [PATH]	Recursively list dirs, and files (no share\path lists ALL shares), ex. 'C\$\Finance'
-r [PATH]	List contents of directory, default is to list root of all shares, ex. -r 'C\$\Documents and Settings\Administrator\Documents'

```

-A PATTERN          Define a file name pattern (regex) that auto downloads
a file on a match (requires -R or -r), not case sensitive, ex '(web|global).
(asax|config)'
-g                  Make the output grep friendly, used with -r or -R
(otherwise it outputs nothing)
--dir-only          List only directories, omit files.
--no-write-check    Skip check to see if drive grants WRITE access.
-q                 Quiet verbose output. Only shows shares you have READ
or WRITE on, and suppresses file listing when performing a search (-A).
--depth DEPTH       Traverse a directory tree to a specific depth. Default
is 5.
--exclude SHARE [SHARE ...]
                    Exclude share(s) from searching and listing, ex. --
exclude ADMIN$ C$'

File Content Search:
Options for searching the content of files (must run as root)

-F PATTERN          File content search, -F '[Pp]assword' (requires admin
access to execute commands, and PowerShell on victim host)
--search-path PATH  Specify drive/path to search (used with -F, default
C:\Users), ex 'D:\HR\'
--search-timeout TIMEOUT
                    Specify a timeout (in seconds) before the file search
job gets killed. Default is 300 seconds.

Filesystem interaction:
Options for interacting with the specified host's filesystem

--download PATH      Download a file from the remote system,
ex. 'C$\temp\passwords.txt'
--upload SRC DST      Upload a file to the remote system ex.
'/tmp/payload.exe C$\temp\payload.exe'
--delete PATH TO FILE
                    Delete a remote file, ex. 'C$\temp\msf.exe'
--skip               Skip delete file confirmation prompt

```

QA: 提示

由于网段问题本次使用以下系统进行实例：

```
Linux kun 4.19.0-kali4-amd64 #1 SMP Debian 4.19.28-2kali1 (2019-03-18) x86_64 GNU/Linux
```

QA:

Q:如果你使用不同网段的计算机则SMBMap将会出现 `Authentication error` 身份验证错误。而这个错误是无法避免的就比如：

A:而SMBmap需要经过192.168.0.1的转发，从而数据包需要经过192.168.0.1才能到达192.168.11.1。而SMBMap是一比较死板的专业性SMB分析工具，所以造成了身份验证错误。

二，命令实例

1.基本扫描参数

smbmap -u Administrator -p 123 -H 192.168.11.150

以Administrator及密码123的身份向目标进行检索共享目录信息

```
root@kun:~# smbmap -u Administrator -p 123 -H 192.168.11.150
[+] Finding open SMB ports....
[+] User SMB session establishd on 192.168.11.150...
[+] IP: 192.168.11.150:445      Name: 192.168.11.150
Disk
----
Documents and Settings      READ ONLY
Program Files                READ ONLY
C$                           READ, WRITE
SMB                          READ ONLY
wmpub                        READ ONLY
IPC$                         NO ACCESS
ADMIN$                       READ, WRITE
root@kun:~#
```

smbmap -u Administrator -p 123 --host-file smbmap

从文件中识别IP地址并进行扫描

```
root@kun:~# smbmap -u Administrator -p 123 --host-file smbmap
[+] Finding open SMB ports....
[+] User SMB session establishd on 192.168.11.150...
[+] IP: 192.168.11.150:445      Name: 192.168.11.150
Disk
----
Documents and Settings      READ ONLY
Program Files                READ ONLY
C$                           READ, WRITE
SMB                          READ ONLY
wmpub                        READ ONLY
IPC$                         NO ACCESS
ADMIN$                       READ, WRITE
root@kun:~#
```

1, 14

smbmap -u Administrator -p 123

以 Administrator 及密码 123 的身份对目标进行扫描共享文件，否则将会发生身份错误。

```
root@kun:~# smbmap -u Administrator -p 123 -H 192.168.11.150
[+] Finding open SMB ports....
```

smbmap -u Administrator -p 123 -s ADMIN\$ -H 192.168.11.150

扫描目标中是否有ADMIN\$共享，并且扫描对方所有开启的共享目录

```
root@kun:~# smbmap -u Administrator -p 123 -s ADMIN$ -H 192.168.11.150
[+] Finding open SMB ports....
[+] User SMB session establishd on 192.168.11.150...
[+] IP: 192.168.11.150:445      Name: 192.168.11.150
Disk
----
Documents and Settings      READ ONLY
Program Files                READ ONLY
C$                           READ, WRITE
SMB                          READ ONLY
wmpub                        READ ONLY
IPC$                         NO ACCESS
ADMIN$                       READ, WRITE
root@kun:~#
```

smbmap -u Administrator -p 123 -d workgroup -H 192.168.11.150

指定扫描工作组为 ，默认工作组为

```
root@kun:~# smbmap -u Administrator -p 123 -d workgroup -H 192.168.11.150
[+] Finding open SMB ports....
[+] User SMB session established on 192.168.11.150...
[+] IP: 192.168.11.150:445      Name: 192.168.11.150
    Disk
    ----
    Documents and Settings
    Program Files
    C$
    SMB
    wmpub
    IPC$
    ADMIN$
    Permissions
    -----
    READ ONLY
    READ ONLY
    READ, WRITE
    READ ONLY
    READ ONLY
    NO ACCESS
    READ, WRITE
root@kun:~#
```

smbmap -u Administrator -p 123 -P 520 -H 192.168.11.150

设置SMB指定端口为 进行扫描，SMB默认端口为

2.命令执行

smbmap -u Administrator -p 123 -H 192.168.11.150 -x ipconfig

在目标主机中远程执行ipconfig命令并将输出结果打印

不仅仅局限与ipconfig，你也可以使用其他命令，比如

```
root@kun:~# smbmap -u Administrator -p 123 -H 192.168.11.150 -x dir
[+] Finding open SMB ports....

4. 下载与上传

smbmap -u Administrator -p 123 -A web -r C\$ -H 192.168.11.150

在对方磁盘C中寻寻找共享文件并下载所有web格式文件

参数主要有：web，global，asax，config 几种模式，分别为：

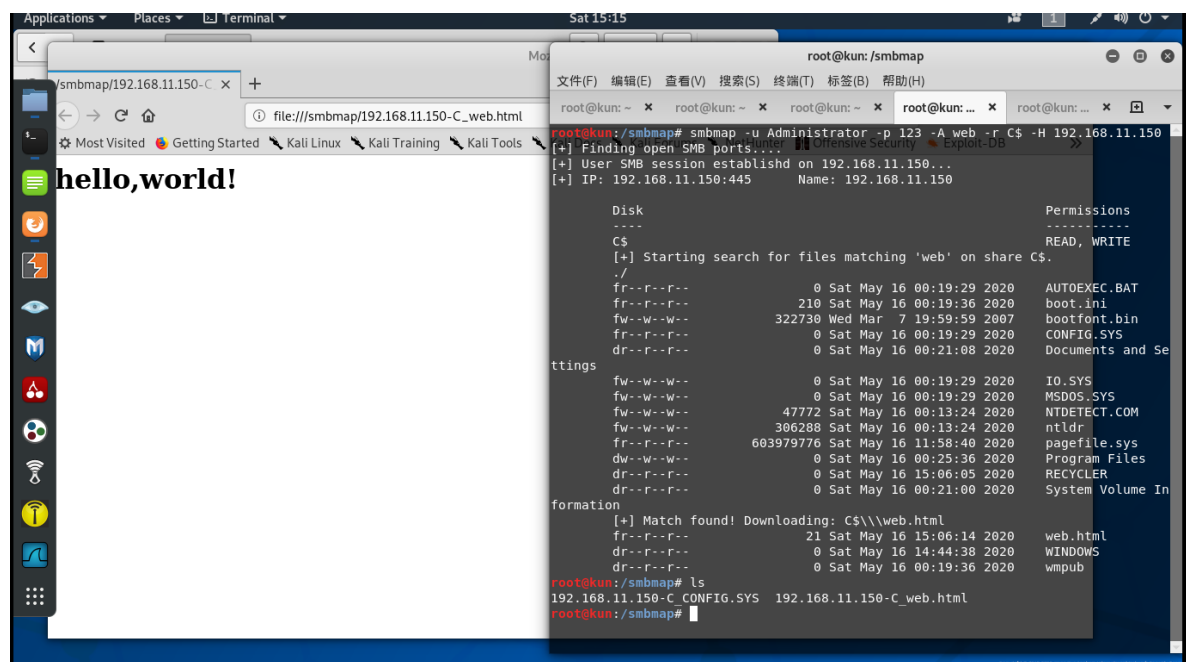

web: 下载web文件

global: 下载全部文件

asax: 下载asax格式文件

config: 下载config格式的配置文件

```
smbmap -u Administrator -p 123 -H 192.168.11.150 --download web.html
```

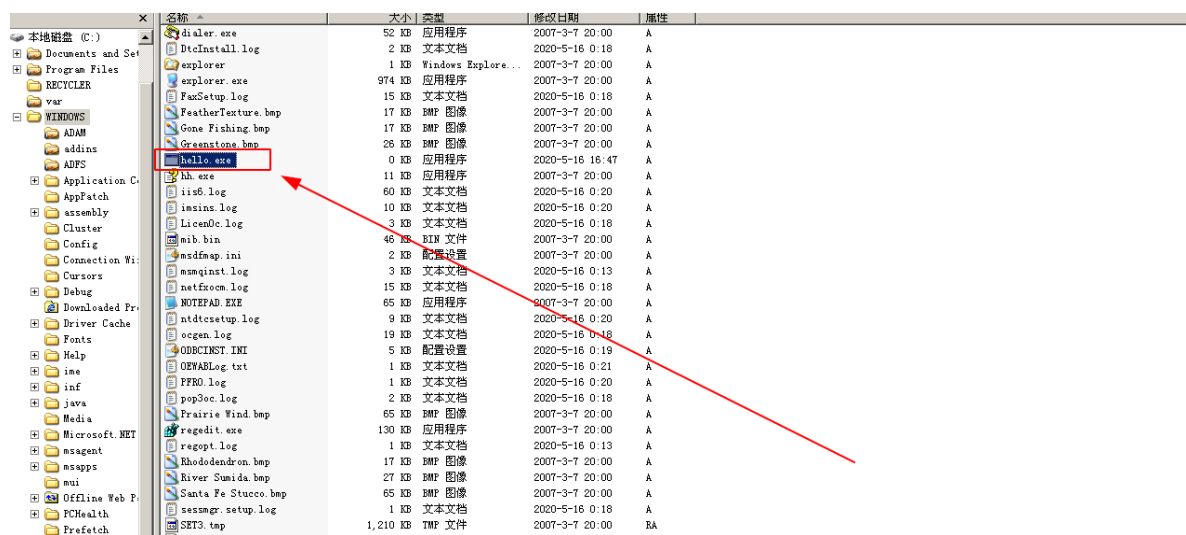

远程下载web.html文件

```
root@kun:/smbmap# smbmap -u Administrator -p 123 -H 192.168.11.150 --download C$\web.html
[+] Finding open SMB ports....

root@kun:/smbmap# ls
192.168.11.150-Cweb.html
root@kun:/smbmap#
```

```
smbmap -u Administrator -p 123 -H 192.168.11.150 --upload /smbmap/Hello.html C$/WINDOWS/hello.exe
```

将 `/smbmap/Hello.exe` 文件上传到目标主机 `C:\WINDOWS` 目录中并重命名为 `hello.exe`

```
root@kun:/smbmap# smbmap -u Administrator -p 123 -H 192.168.11.150 --upload /smbmap/Hello.exe C$/WINDOWS/hello.exe
[+] Finding open SMB ports....
[+] User SMB session established on 192.168.11.150...
[+] Starting upload: /smbmap/Hello.exe (0 bytes)
[+] Upload complete
root@kun:/smbmap#
```

```
smbmap -u Administrator -p 123 -H 192.168.11.150 --delete C$/WINDOWS/hello.exe
```

远程删除 `C:/WINDOWS/hele.exe` 文件

```
root@kun:/smbmap# smbmap -u Administrator -p 123 -H 192.168.11.150 --delete C$/WINDOWS/hello.exe
[+] Finding open SMB ports....
[+] User SMB session established on 192.168.11.150...
[+] File successfully deleted: C$/WINDOWS/hello.exe
root@kun:/smbmap#
```

```
submap -u Administrator -p 123 -H 192.168.11.150 --delete C$/WINDOWS/hello.exe
```

删除文件但不做验证其文件 ☐ 是否删除

对于不加 ☐ `--skip` 参数和加上该参数最明显的就是在于数据包中，你可以理解为加上 ☐ `--skip` 参数只发送一个数据包从而结束（FIN）。

而不加上 ☐ `--skip` 则会有两次数据包，一次发送一次回应。
